🔗 Portfolio: <https://faraz-devops-portfolio.vercel.app/>

## SUMMARY

Detail-oriented Junior DevOps Engineer with 2 year of hands-on experience in automating, containerizing, and securing infrastructure. Proven expertise in streamlining deployment workflows using AWS, Docker, Jenkins, and Terraform. Strong foundation in Infrastructure as Code (IaC), Linux administration, and CI/CD implementation. Passionate about bridging the gap between infrastructure automation and application scalability.

## TOOLS & TECHNOLOGIES

- **Cloud Platforms:** AWS (EC2, S3, RDS, IAM, VPC, ECS Fundamentals), Vercel
- **DevOps & IaC:** Docker, Docker Compose, Terraform, Linux (CentOS/RHEL), Shell Scripting
- **CI/CD & Automation:** Jenkins (Distributed Architecture), GitHub Actions, Automated Pipelines
- **Version Control:** Git, GitHub
- **Monitoring & Core:** Prometheus, Grafana, Networking Fundamentals, Systems Administration

## EXPERIENCE

### CodeAlpha | DevOps Engineering Intern (Remote)

May 2026 – June 2026

- **CI/CD Automation:** Developed and managed automated continuous integration and deployment pipelines utilizing **GitHub Actions** and **Jenkins**, effectively accelerating code delivery cycles and eliminating manual errors.
- **Containerization:** Engineered multi-container application environments using **Docker** and **Docker Compose**, ensuring flawless consistency between local development, testing, and staging setups.
- **Infrastructure as Code:** Practiced automated cloud provisioning leveraging **Terraform** to deploy reproducible AWS resources including **EC2** instances and custom **VPC** configurations, successfully mitigating configuration drift.
- **Scripting & Security:** Authored optimized **Bash/Shell scripts** integrated with Linux cron jobs for automated system health checks and log monitoring; configured secure AWS **IAM** access control policies and protected **S3** storage buckets.

### Personal & Academic DevOps Labs — Self-learned Engineer

2024 – 2025

- **Distributed Architecture:** Configured a fully distributed Jenkins testing cluster using a Linux (CentOS) virtual machine running inside VirtualBox as an isolated remote agent node via SSH remoting protocols.
- **Observability Infrastructure:** Constructed standalone local monitoring configurations utilizing **Prometheus** and **Grafana** to collect and visualize container metrics and memory allocation.

- **Systems & Version Control:** Developed robust Linux administration and core networking competencies while implementing Git branching strategies and repository access control.

## KEY PROJECTS

---

### Distributed Jenkins Architecture with Secure Node Isolation | [@ GitHub Link](#)

- Architected a distributed Jenkins cluster using a virtualized CentOS/RHEL environment, utilizing SSH remoting protocols to maintain secure, isolated node execution.

### ProtonAgency Automated Pipeline | [@ GitHub Link](#) | [@ Live Link](#)

- Implemented a continuous deployment pipeline triggered by Git webhooks, automating front-end delivery to Vercel and optimizing build configurations.

### Dockerized Web Server Deployment | [@ GitHub Link](#)

- Containerized a web server application, managing image lifecycles and network configurations to support scalable development testing environments.

## ACADEMICS

---

### Virtual University of Pakistan (VU) | Lahore, Pakistan

Bachelor of Science in Computer Science (BSCS)

2023 – 2027

## CERTIFICATION

---

### Diploma in Cloud Cyber Security | AlNafi International College

Link: ([Certificate](#))

2024 – 2025
